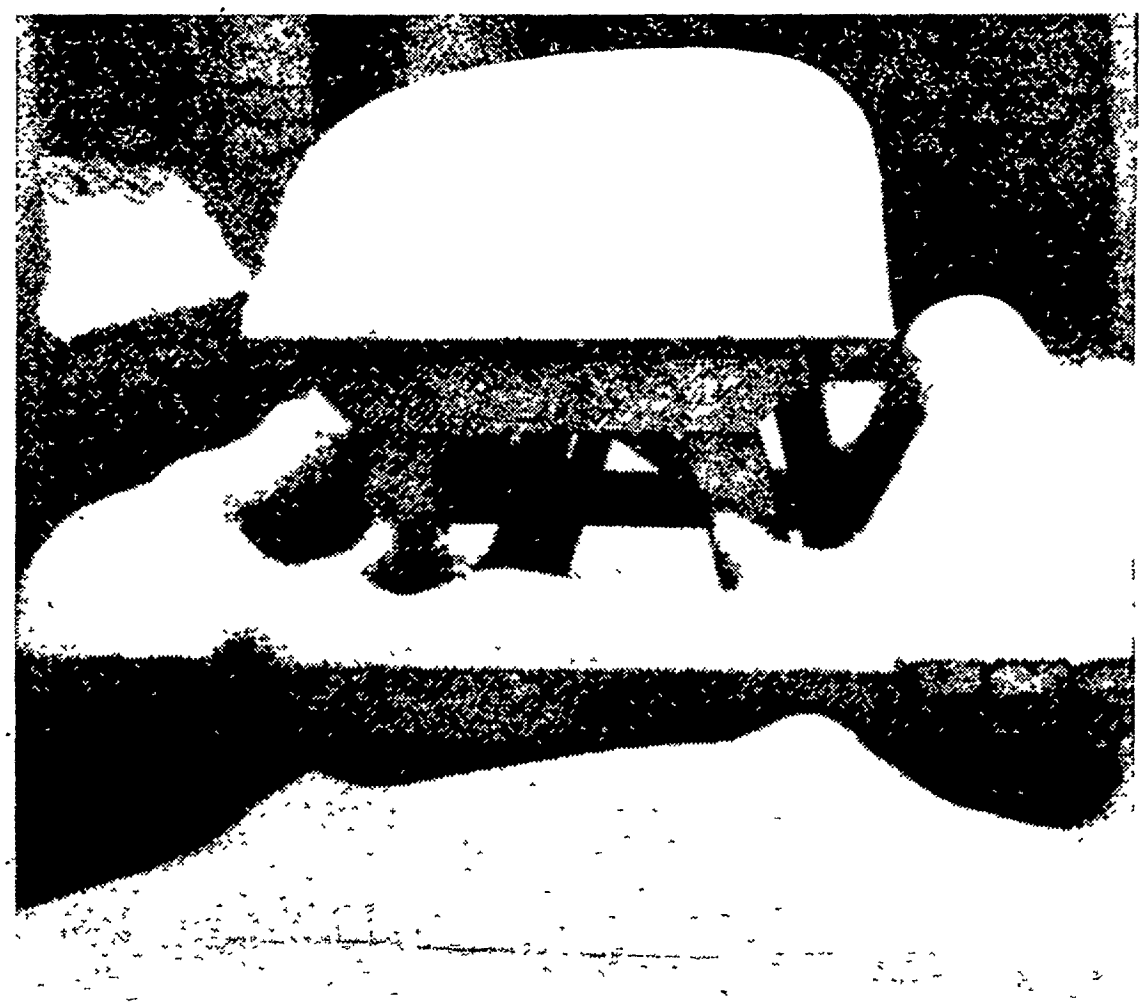
Lancaster Farming

VOL 12 NO. 11 Lancaster Farming, Saturday, February 11, 1967 $2 Per Year



THE SEASONS MEET — Anyone for a picnic? Would you believe, maybe, a cold lunch? How about one-foot snow cones, to go? L. F. Photo

Top Corn Awards To Jackson And Frey At County Crops & Soils Day

One of the highlights of the Lancaster County Crops and Soils Day held yesterday at the Guernsey Sales Pavilion was recognition of countians in the hand-harvested class of the Five-Acre Corn Club by associate county agent Arnold G Lueck

The top countian in 1966 was Herbert Frey, Marietta R1, with a yield of 1959 bushels per acre Second high yield was 1788 bushels scored by George W Jackson & Son, Christiana R1 Both farmers received purple ribbons during Farm Show Week for finishing among the state's top five corn growers

Lueck noted that state yield figures of farmers receiving recognition was the lowest in five years due to the past year's drought. He also announced that the hand-harvested class in corn club competition had been discontinued.

"This move is in keeping with the objective of making yield data more realistic in terms of farm conditions," Lueck explained the change-over to machine-harvested competition

For the top eighteen county entries in the 1966 corn contest, yields averaged 143 7

(Continued on Page 5)

Dairy Day And Meetings Slated

Lancaster County's annual dairy day will be held at the Guernsey Sales Pavilion on March 7th, associate county agent Victor Plastow announced this week

The program will feature a slate of specialists from Penn State University, and a panel of local dairymen. Plastow said The affair will begin at 9 a m, and will continue until 3 p m Lunch will be available at the Pavilion for $1.

In addition, Plastow announced two, extension spon-

Doebler And Lueck To Be Featured At Farmers' Corn Growing Meeting

A member of the Lancaster County Extension staff and a well-known breeder will team up next Wednesday evening at the Lincoln Independent School to discuss some important factors and experiences in "Corn Growing", according to an announcement this week by program chairman Edwin F Fox, Ephrata R3

Arnold G Lueck, associate county agent will speak on some of the current trends in corn growing — narrow rows, plant population, selection of hybrids, and use of starter fertilizers

T A. Doebler, Sr, who operates a 400-acre seed farm in Clinton County, will talk on corn growing from a farmer's viewpoint Doebler was recognized during this year's Farm Show as the 1966 Pennsylvania Corn Club Champion in the machine harvested class His yield averaged 158 7 bushels of shelled corn per acre His plant population in that prize-winning test was 27,750 plants per acre Doebler has long been an advocate of high soil fertility and organic matter levels

The February 15th meeting will start at 7 30 p m, Fox said, emphasizing that all interested persons would be welcome

Egg Marketing Meeting Moved To Feb. 16th

One of the victims of this week's unscheduled snow storm was the egg marketing conference slated for last Tuesday This event, sponsored as part of an informational series by the Lancaster County Poultry Association, has been rescheduled for Thursday, February 16

In making the announcement, program chairman J Harold Esbenshade said the discussion will be held at the Lititz Community Center, and the panel of local marketing egg men will talk on new products, egg breaking, outside competition, and egg quality

Speakers for the informational meeting will be: R. W. Sauder, Lititz, Earl Hess, Hess

Tax Break Seen For Investment Credit

Investment credit provides a real tax break for businessmen, including farmers It can also be a source of trouble, according to W T McAllister, farm management specialist at the University of Delaware

Trouble starts when farmers don't keep equipment on which they have claimed investment credit for the full period of time used in computing the credit McAllister uses the example of a farmer who bought a tractor in 1962 for $5,000 He expected to keep it for

(Continued on Page 5)

Talks & Exhibits Featured At Area Dairy Conference

More than 400 farmers were on hand Thursday at the Guernsey Sales Pavilion for the 2nd annual southeastern dairy conference The show, which was snowed-out at its scheduled meeting Tuesday, featured talks by representatives of the four firms sponsoring the meetings, and numerous commercial exhibits Sponsors were Allis-Chalmers, John W Eshelman & Sons, Curtiss Breeding Service, Inc, and New Holland Supply Co, Inc

In discussing the future of dairying in Pennsylvania, Bert Hutchinson of Hess & Clark told the farmers that southeastern Pennsylvania had the brightest prospects in the state He said, "If you continue to modernize and to take advantage of the information that's available, you should do all right '

Using Penn State data, Hutchinson showed that farmers with an average of 30 cows have net incomes of less than $3000 He showed that an increase of ten more cows will increase net income by 50 percent

Weekly Poultry Report

Eastern Pennsylvania And New Jersey
WEEKLY SUMMARY

February 8, 1967
LIVE HENS

Prices for light hens were unchanged. In instances, however, where full condemnations were reduced and producers provided truck loading and gathering services, prices in eastern Pa sections ranged as high as 7¾ cents on large volume blocks. Movement light as dealers and plants were severely hampered by snow and stalled traffic, particularly at points in N J.

Interest for heavy hens fair. Area offerings very light with occasional flocks negotiated at 15½ cents. Prices paid at farm· light hens 6-7 cents, mostly 6½-7, heavy hens, too few sales to report.

Fogelsville

February 7, 1967

DUE TO THE SNOW STORM THERE WAS NO AUCTION HELD THIS WEEK.

Eastern Shore Exchange
WEEKLY SUMMARY

Although the lot-average live price for broilers and fryers this week continued to improve, averaging 1¾ cents above last week's average, the steady Monday through Thursday up-trend was reversed this week for the first time in many weeks.

Prices paid during the week ranged from a high of 20.9 cents on Monday to a low of 17.5 cents per lb. on Thursday.

Sales for the week were off about 200,000 at 1 2 million head.

Tobacco Research Activities Reviewed

Research on ways to increase the productivity of workers in tobacco production and marketing was urged by the Tobacco Research Advisory Committee of the U. S. Department of Agriculture at its recent annual meeting in Washington, D. C.

The high labor requirements in the American tobacco industry reduce the competitive position of American tobacco in foreign markets and are partly responsible for relatively low incomes for tobacco workers and their families, the committee said Equipment and facilities should be developed to enable the tobacco workers to produce or handle more tobacco per hour, and changes and short cuts should be worked out that will reduce or eliminate work that is not absolutely necessary

The committee also recommended continuation and expansion of work to determine how different factors affect tobacco quality, including the effects of production practices, soils and fertilization, time of planting, disease and pest control, and ripening, curing, and preparation for market.

Committee members said they were pleased with USDA research on the physical and chemical properties of tobacco and smoke, and on the aging and fermentation processes in tobacco production This research will provide information that will put the industry in a position to remove or neutralize any deleterious materials or compounds that may be identified and provide data useful to the entire tobacco industry.

There is a need to develop objective ways to measure some of the properties of tobacco necessary to grading, such as color, texture, elasticity, and ripeness, the committee said There is also need for a way to rapidly determine moisture content.

From Where We Stand . . .

More Money For County Extension

We applaud the action taken this week by State Representative Sherman L. Hill in introducing a bill to eliminate the unrealistic ceiling on the amount of money counties can appropriate for agricultural extension work.

The extension service is a joint venture of the U. S. Department of Agriculture, Penn State University, and the counties. Hill's bill would relieve county commissioners of the $20,000 limit which they can now appropriate for agricultural extension, and would reword the law to permit it to cover home economics extension also.

It is unrealistic to suppose that the extension needs of all counties are the same. As the law now operates, a prime agricultural county such as Lancaster has the same appropriation limit as any non-agricultural or small population county.

We urge your support for Rep. Hill's proposal — give it to him in writing. Our county commissioners should have the right to meet this appropriation need as they see it, and home economics extension should be as one with agricultural extension.

★ ★ ★ ★

Futures Market Report Added

On your way to the editorial page this week you may have noticed something new on page 2. In view of the increasing local interest in futures trading, particularly cattle, we plan to carry the latest available Chicago closing futures prices as a weekly feature on the Market Report page.

Thursday closing prices on hog futures, and on Maine potatoes at New York, will also be reported regularly.

The addition of this report is part of our continuing effort to supply Lancaster County farmers with information of value. To best serve you, we would appreciate your comments on this futures market report. And, as we have stressed previously, your comments on any material we carry, or on things you think we should carry, are always welcome.

★ ★ ★ ★

Meat-Buying Habits Studied

The meat-buying habits of the American consumer is the subject of an all-out industry survey which is being made on a nationwide basis on behalf of the meat industry.

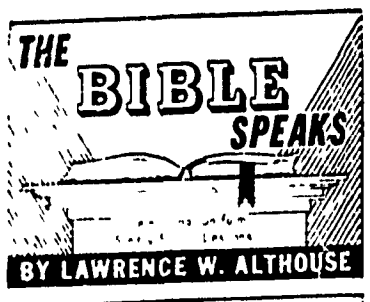
The survey is being conducted by a private market research firm and financed jointly by the USDA and the National Live Stock and Meat Board.

Through interviews, at least 3000 housewives will be quizzed on frequency of serving various meats and the reasons; purchase practices; patterns of preparation and use; reactions to frozen meat; "images" of meat; and background information on the respondents.

The purpose of the study is to learn why the consumer buys what she does, and why she doesn't buy something else. It will also examine the consumer's knowledge of meat quality, her attitudes toward service and self-service types of meat merchandising, and her awareness of proper meat cookery procedures.

In addition, the study will question consumers on use of new recipes, and new ideas in menu planning, and will consider the effects of outdoor cookery on consumer attitudes.

The findings of these, and many other factors will be categorized by backgrounds of respondents, by family size, education, occupation, community size, parental eating patterns, and income. It should yield a lot of valuable information to the meat industry, and may dictate changes in meat handling that will, in time, filter down to the farmer himself.



Beyond Being Sorry

Lesson for February 12, 1967

Background Scripture Luke 13 and 14.
Devotional Reading Psalm 5

"What have I done to deserve this?" How often pastors hear that cry from people in hospital beds. Despite the teaching of Christ, many people still assume that suffering and sickness are sent as punishment from God.

Rev. Althouse

Eliphaz, supposedly a friend, said to calamity-stricken Job: "Who ever perished being innocent?" Job's misfortunes, he was sure, were the result of some sin he had committed. If Job were innocent, Eliphaz thought, he would not be suffering. It was not so strange a concept, for most people in those days reasoned in that manner.

Innocent Suffer Too

So too in the first century A.D. it was generally assumed that all suffering was sent by God as punishment for sin. "Who sinned," they had asked Jesus of the man born blind, "this man or his parents, that he was born blind?" The answer he gave them was surprising: neither! Throughout his ministry Jesus attacked the idea that suffering was necessarily punishment sent by God. The righteous and the innocent also may suffer. The crucifixion of Christ, the sinless sufferer, is history's prime case-in-point.

Nor should we assume that if we escape suffering and hardship, it is because we are righteous and blameless. Do not, Jesus advised, execute judgment upon the Galileans martyred in the temple by Pilate or upon the men accidentally killed by the falling tower of Siloam. See to your own souls, for you are subject to God's judgment every bit as much as they.

An elderly woman to whom I used to take Holy Communion usually balked when I would come to the "Prayer of General Confession." "I don't need that," she'd snap, "I haven't done anything since you were here the last time." The call to repent is often hard to accept, particularly when things seem to be going well. This is no reason for complacency, Jesus warned: the judgment is surely coming. Only the mercy of God, not your righteousness, has kept it from you so far. Just as the unfruitful vine will eventually be cut down, so will the unrepentant child of God experience his judgment.

God's Good News

In John Barth's novel, Giles Goat Boy, there is a sobering thought: to the effect that self-knowledge is always bad news. If we are fairly successful in being honest with ourselves, we know this is true. When we dig behind the masks we wear in public, when we peel off our own self-deceptions, we catch a glimpse of what we are really like. Often, what we see is not very pleasant. Self-knowledge is bad news.

There is also good news, however, that begs to be considered: Repent and be saved! God waits far beyond human patience and endurance to give us one more opportunity to repent and accept his gracious mercy. He is ever looking for the change in us that makes possible a new relationship with him.

"O.K., O.K., I'm sorry," you say, "Let's forget about it!" But that is not repentance. To repent means far more than expressing regret, of being sorry. Repentance means a change of direction. As Dwight L. Moody put it, it is saying to one's self: "Right about-face!" If we are really sorry about our sin, we will want to give it up permanently, not just for a while. "Repentance," wrote Theodore Ledyard Cuyler, "to be of any avail, must work a change of heart and conduct."

What the vinedresser wanted of the vine was not an expression of regret, but fruit. That is also what God wants from us.

Pa. Landrace Breeders Plan Show and Sale

The Pennsylvania Landrace Swine Breeders Association announced plans this week for a show and sale of 50 head of bred and open gilts, and boars, for Saturday, March 18. The statewide event will be held at Martin's Sale Barn, Blue Ball.

The show, which will begin at 10 a.m. will be judged by livestock extension specialist Dwight Younkin. Auctioneer for the sale beginning at 1 p.m., will be Paul Z. Martin.

Also on the program will be Eugene Benedict from Culvert, Indiana, representative of the American Landrace Assn.

Serving on the state board of directors from Lancaster County are Raymond H. Weaver, New Holland R1, and James Z. Martin, Christiana R1. Martin is also secretary-treasurer of the state association.

(Continued from Page 1)

Service, described the four features his firm considers of prime importance in its "Complete Cow" breeding program. 1 — Production, 2 — Type (strength) — good legs, strong rear udder attachment, depth of body, and width between front legs — to name a few type characteristics. 3—Longevity. 4—Reproduction.

Kelly said that Curtiss bulls are proved nationwide. "There is a better than two ton difference in milk production between high and low states. By proving our bulls in only the high production states we could make them look better, but that wouldn't give you a true picture."

Kelly showed slides of outstanding Curtiss bulls, their dams and daughters, describing the merits of each.

SYSTEMS APPROACH

Dick Hathaway, Allis-Chalmers, explained his company's complete systems approach to farming, that is, a combination of equipment to best fit any particular cropping operation at a minimum capital investment.

MILK FEVER AND KETOSIS

The final speaker for the session was Dr. E. I. Robertson of John W. Eshelman & Sons. He discussed the nutritional aspects of milk fever and ketosis in dairy cattle, and cited preventive measures a farmer can take through a well-designed feeding program.

Robertson said the probable cause of milk fever is often a lack of adequate phosphorus intake during the dry period, or a wide calcium to phosphorus ratio which makes phosphorus largely unavailable. When a mineral-starved cow approaches the onset of milk production, calcium is drained from the blood system faster than it can be replaced. Milk fever often results, the nutritionist said.

As a preventive measure, he recommended feeding grain at ½-1% of body weight during the dry period, increasing the amount as calving time approaches. He also advised dairymen to provide free choice minerals, containing a high level of phosphorus, in a proper mineral feeder.

Ketosis, on the other hand, is a disorder involving energy utilization, Robertson said. It occurs most frequently following calving and during periods of high milk production.

To help prevent ketosis, he recommended adjusting grain feeding upwards before and after calving, reducing roughage if necessary to increase appetite for grain. He also recommended feeding a Ketosis Control Ration before and after calving.

Jerry Shaffer of Pennsylvania Power & Light Co. opened the day's program with pictures illustrating uses of electricity on the farm.

Master of Ceremonies for the affair was Robert Hill of the Keenco Poultry Equipment Co.

The meeting is slated for 7:45 p.m., Esbenshade said, and will be followed with door prizes and refreshments.

Now Is The Time . . .

By Max Smith, Lancaster County Agent

SMITH

To Put Agreement In Writing

There are many forms of farm leases and farm agreements, but not any of them are better than the one in writing with both parties possessing a copy. Since about 25 percent of our Lancaster County farms are operated by tenants, a good many people are involved in farm leases. For a better understanding and more pleasant relations among all concerned, we stress the great importance of having the partnership terms in writing.

To Insulate Buildings

There is little doubt about the value of adequate insulation in remodeling or new construction. In these times of controlled environment, the value of insulation is returned many times to the owner. In old buildings this is often difficult, but in new structures plenty of insulation should not be overlooked. Less heat will be required for winter, and cooler inside temperatures may be expected during hot, summer months. Sufficient insulation will also help control condensation and ease depreciation of the building.

To Care For Ewe Flock

Sheep producers are in one of the most important times of the year, the ewes are either in the lambing period or soon to lamb. The income from the lamb crop should be the major one for shepherds. Daily outside exercise is very important for strong lambs and healthy ewes. Free access to top quality legume hay (alfalfa preferred) will furnish many of the needed minerals and help provide a laxative diet. The feeding of grain daily (1 to 2 pounds per head) will get the ewes in good condition. The ration should also include some commercial protein such as linseed oilmeal or soybean oilmeal. If legume hay is not being fed, then 10 to 15 pounds of feeding molasses per hundred of feed will be helpful in getting a laxative feed. Neglected ewes may become victims of a paralysis condition just prior to lambing.

● Tax Break

(Continued from Page 1)

six years, so he claimed two-thirds of the investment credit allowed, or $235. However, the tractor wasn't large enough, so in 1966 he traded it for a larger one, investing an additional $4,500

Now his taxes are doubly complicated, McAllister points out. Since he owned the tractor for four years, the farmer qualifies for only one-third of the total investment credit—not the two-thirds he claimed Therefore, on the 1966 tax report he must pay back half of the investment credit he claimed, or $117 50 A special line, 14b, has been added to the 1040 form for this purpose

The farmer's second problem is to determine the basis for figuring investment credit on the new, larger tractor he bought The basis for this credit is the amount he paid over and above the trade value of the original tractor (in this case, $4,500) plus the undepreciated value remaining on the old tractor Since there were two years remaining of the six-year life — or one-third — of the original $5000 tractor, this remaining value is $1667 The basis for determining investment credit on the new tractor would be the sum of $4,500 and $1667, or $6167

If the life of this new tractor is six years, the farmer could claim two-thirds of the full seven percent investment credit allowance This credit—$287 in this example—would be reported on form 3468 and the tax credit transferred to form 1040, line 13

Take advantage of investment credit, McAllister advises. It may seem complicated, but each dollar of tax credit is a dollar of tax you don't have to pay.

bushels and plant population averaged 20,700 per acre, Lueck noted.

SOYBEAN REPORT

Leading off the all-day program Friday was John Yocum, superintendent of the Field Research Laboratory near Landisville Yocum reported on soybeans as a possible crop for Lancaster County. He related yield data on 13 varieties which were tested for a three-year period, and stressed the fact that if area farmers could obtain yields of 40 bushels per acre, soybeans could very likely compete with corn as a profitable crop

"If a farmer doesn't need all his land for feed production for his livestock there may well be a place for soybeans in the rotation," Yocum said. He added that soybeans are more adaptable to dry conditions than corn, for example, and could possibly be planted after barley was harvested, instead of leaving land idle Yocum also noted that the costs of raising soybeans are generally less than those of corn.

Other speakers on the program included. George Berggren, agronomist, James Eakin, chairman agronomy extension section, Clarence Bryner, agronomist, and Larry Click, agricultural engineer. With the exception of Lueck and Yocum, the speakers were all from Penn State University

FARMER PRICE LEVELS STEADY IN JANUARY

HARRISBURG — Price levels remained steady for Pennsylvania farmers during January The crop portion of the January index of prices received was pushed upward by increases in fruit and vegetable income However, this was offset by a decline in the livestock and livestock products index resulting from lower dairy and poultry prices.

Although meat animal prices were generally higher, hog prices continued their down-

13 Beef & Lamb Club Members Get Awards

Awards were presented by County Agent M M. Smith to thirteen members of the Red Rose 4-H Baby Beef & Lamb Club last Friday night at the club's annual banquet held at the Dutch Town & Country Inn, Vintage

For best county steer at the Farm Show Michael Hosler of Manheim R3 received the J. C. Snavely trophy and a watch from New Holland Machine Company Hosler also received a tray from Grubb Supply Co. as the best county showman at the Farm Show.

Hosler's Hereford won the breed reserve championship at Harrisburg.

The award for second best steer went to Glenn Flickinger, whose entry placed second in the heavyweight Angus class at the Harrisburg show. He received the Farm Credit Assn. trophy.

Susie Hess, whose Shorthorn won the breed championship at the Farm Show, was presented with the Wolgemuth Bros. trophy. Another Shorthorn showman, Kendace Bory, received the Richard Ruhl feeds award. Her steer was reserve Shorthorn champion.

A bowl from Cope and Weaver went to Sharon Weaver whose Angus was the grand champion of the Southeast District show at Lancaster last December.

The district reserve champion was shown by William Houser. He was awarded a silver tray from Henry E. Martin Implement & Truck Co.

The Eby's Feed Mill trophy for high record book score went to Dale Bushong who scored 97.5 of a possible 100 points. Award for high gain was presented to Carolene Brubaker on behalf of Hempfield Mills

Best showman at the district show was Nancy Frey; she received a tray from Grubb Supply Co

A $25 U.S. Savings Bond was presented to Tom Houser for his competition at district, state, and national levels in 4-H conservation The award was from the National 4-H Conservation Society

LAMB CLUB AWARDS

Lamb club awards went to Fred Hess, Donald Miller, and Linda Obei

Hess received trophies from the S H Hiestand Co and Miller and Bushong His entries at the Farm Show won the grand championship and grand champion single lamb

Miller was presented with trophies from Wenger Feed Co. and Miller and Bushong. He had the reserve grand champion lamb at the Farm Show.

Miss Ober received the First National Bank of Elizabethtown trophy as the high project scorer in lambs. Her score, 96.9, was achieved in her first year of club work, Smith reported.

The county agent said 115 members completed baby beef projects, out of 134 who started, and 10 of 11 lamb project members completed theirs.

Nearly 400 persons attended the annual banquet meeting.

Water Resources

Susquehanna River To Supply 90% Of County's Water Needs By 2010

Part IV . . .

by Don Timmons

SUMMARY — The Water Resources study made by E. H. Bourquard & Associates of Harrisburg for the Lancaster County Planning Commission completely assessed present sources of water in the county —ground water and streams; and it examined the capabilities of the 30 water supply agencies in the county. The study set two time levels when changes would be required to accommodate the increasing water needs of the county's population — 1985 and 2010.

Briefly, the survey showed that the county's streams were inadequate as reliable future water sources. It encouraged further development of ground water supplies, and felt these would be adequate for the next 20 years. Beyond 1985, however, it recommended some sweeping changes in the water supply system of the entire northern section of the county — principally, developing the Susquehanna River as the county's main water source by the year 2010.

SUPER WATER AUTHORITY

By 1985, the report recommends a merger of 23 of the county's present 30 water supply agencies into a super water authority. This cooperative effort is termed the "Upper Susquehanna River Water Supply Project". It would utilize water from the Susquehanna River, and would serve more than 90 percent of the combined 2010 water demands of all county water supply agencies.

These supply agencies would stretch in a continuous band across the northern part of the county from Elizabethtown and Columbia on the west to Adamstown and Terre Hill on the east. The population served by this supply belt is expected to have a combined daily water demand of 75 million gallons per day (M.G.D.) by the year 2010.

ONE SOURCE

The study points out that the case for serving the water needs of many communities from one central source is particularly attractive in this case because of the age and condition of present facilities. Existing water treatment facilities of all the major water agencies are 25 or more years old (with the exception of Lancaster's Susquehanna River plant). These will require major modifications or complete reconstruction by about 1985, the study contends.

Probably the most attractive features of the river proposal, the authors added, is the beneficial effect on future growth and well being of the area served, plus development of the remainder of the county and adjacent counties.

WATER COSTS

To service the proposed area, the project would provide facilities for securing Susquehanna water, treating it, and delivering potable water to all agencies in the system. The transmission main would run from a proposed 50 M.G.D treatment plant near Marietta, generally across northern Lancaster County, to New Holland. It would supply water via booster pumping stations, and branch and service area lines, to the service agencies. Enlarging Lancaster's Susquehanna facilities would make up the balance needed.

The total cost of the project, which includes further additions to Lancaster's Susquehanna River facilities, is estimated at $23 million. Those agencies not included in the project are expected to meet their increased 2010 demands by further development of ground water sources at an estimated cost of $189,000.

Planning for the Upper Susquehanna River Water Supply Project should begin shortly after 1970, the report states, and it should be accomplished by a newly created county authority

The authors of this extensive study see many problems before such a super water authority can be successfully organized. Certain legal, technical, organizational, fiscal, and public relations aspects must precede implementation of the project.

To meet each of these potential stumbling blocks, the study urges more detailed studies, especially considering that it may be as long as twenty years before the need for creating such a super water authority will exist, and many facts and conditions could change by that time

It is further recommended that associations representing irrigation, recreation, sportsmen's and other local interests be formed within stream basin limits Some, such as irrigation districts or associations, may eventually evolve into authorities to construct, operate and maintain facilities within their area of interest, the report concludes.

New HIGH CAPACITY AUTOMATIC BUNK FEEDER

GIANT CAPACITY
A powerful 9 inch auger is offset within a giant, fully enclosed 12-inch steel hood. This unique design provides a reservoir for silage and feeds the full length of the feeder, greatly increasing the capacity and speed with which feed moves to the livestock. Handles the output of the largest silo unloader with ease.

FEEDS ENTIRE HERD AT ONE TIME
Feed is augered the full length of the enclosed hood and is then automatically dumped into the feeding bunk, providing equal rations to each head of livestock *at the same time*. No cattle crowding No spilled and wasted feeds. When feed is dumped, the hood closes automatically and repeats as often as needed.

SILENT, CLOG-PROOF OPERATION
Powerful 9-inch auger never touches the metal hood; eliminating metal-to-metal friction and providing the right clearance to prevent binding and clogging even when materials have high moisture content. Horsepower requirements are greatly reduced too.

LET US GIVE YOU COMPLETE DETAILS OF THE AMAZING VAN-DALE S-17 BUNK FEEDER

Amendments to Federal Shell Egg Grading Program Proposed

The U S Department of Agriculture has announced a proposal to amend the regulations which govern its shell egg grading program with the aim of more accurately reflecting the quality of eggs now being produced and marketed

A major feature is a provision for "origin" and "destination" grading, which would apply both to consumer and procurement grades "Origin" grading would be defined as "grading which is performed other than where the eggs are packed or consumed" Quality requirements for "origin" gradings would be raised above current standards Requirements for "destination" gradings would remain the same as under current regulations Another proposal would eliminate export grades and Procurement Grades III and IV since they are no longer used

Other proposed amendments would:

Provide for a new identification mark on consumer egg cartons, similar to the USDA grade shield used for poultry and poultry products

Provide for an identification mark, similar to the consumer grade mark, for use on bulk packs of eggs for which the grade is determined on a sample basis

Change sampling and testing of eggs under USDA's Quality Control Program from weekly to biweekly Weekly tests would be performed, however, if conditions required it

Provide additional requirements concerning shell-egg plant operations and facilities, and establish new requirements concerning the health and hygiene of plant employees.

Additional minor changes in the regulations also are proposed, USDA said.

Manor Young Farmers Map Routes To Greater Profits In Short Course

by D. R. Hackenberger, Vo-Ag Instructor

For the past month 22 Manor Young Farmers have been involved in making soil and field maps of their farms The maps indicate the boundaries of the farm and of each field, the field number, the acres of each field, and the soil types on the farm Along with the soil type identification is the percent slope of each field, the degree of erosion, and the capability class of each soil The maps were made as part of a short course designed to have local farmers become more familiar with the soils they are farming, and to encourage them to manage soils to their highest potential.

FIELD RECORD SYSTEM

Each farmer also developed a field record system for his farm He will record such information as: the crop in each

(Continued on Page 9)

ORVAL BASS, county conservationist with the U. S. Soil Conservation Service, talks to a group of Manor Young Farmers about the amount of soil that will be lost in a year due to erosion.

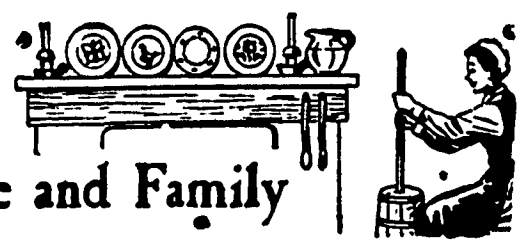
Support Your Lancaster County Poultry Ass'n.



For the Farm Wife and Family

By Mrs. Richard C. Spence, Food Editor

For Your Information . . .

SPENCE

Do you know how to separate whole lettuce leaves from a head for lettuce cups? First cut out the solid stem portion. Hold the stem end up and put it under a strong stream of cold water from the sink faucet. Soon the lettuce feels heavy and the weight of the water starts to separate the leaves from the head. Begin at the stem portion, and slowly peel off each leaf. The leaves are strongest at the stem end and if you pull downward from the stem end and while the cold water flows briskly through the leaves they separate with little tearing.

COOK SAUSAGE THOROUGHLY FOR YOUR FAMILY'S SAFETY

Of the available sausage products, fresh sausage and uncooked smoked sausage are the most perishable. For your family's protection and enjoyment of this meat product, you need to know what storage and cooking methods are required. And this can be confusing since there are some 200 varieties of sausage on the market

One of the two most perishable varieties is fresh sausage It's made from meat that hasn't been cured or smoked It should be refrigerated and used within two to four days after purchasing, or it will become rancid

Pork sausage is probably the most popular of the fresh sausage varieties It is made from freshly ground pork seasoned with sage and stuffed into a variety of shapes Pork sausage has a pink color when first made which later turns grey when exposed to air. Like all pork products it must be thoroughly cooked before serving. There are no traces of pink on the interior when it is properly cooked.

One way to cook fresh pork sausage is to place it in a cold skillet, add about one-fourth cup cold water, cover and steam for 8 to 10 minutes over medium heat. Then remove the cover and cook until it's golden brown Also, you can bake links in a 400 degree oven until they're browned and thoroughly cooked.

Other names for fresh sausage are Country-style, fresh breakfast sausage, fresh sausage, Bratwurst, fresh Italian pork sausage and Weisswurts or white sausage. These are all fresh pork and need to be thoroughly cooked.

Another perishable sausage variety, uncooked smoked sausage, it made from either fresh or cured meat that has been smoked but not cooked You can store it under refrigeration safely up to one week before using. The uncooked smoked sausage, like the fresh sausage varieties, must be cooked well before eating.

Cook smoked country-style sausage and smoked pork sausage links the same way as fresh pork sausage. They are made of pork too, but are mildly cured and smoked. Red pepper and paprika are often added in addition to the sage seasoning.

Serve fresh and uncooked smoked sausages with waffles or pancakes, American or German potato salad, baked beans or sauerkraut. Sausage is good in casseroles, meat loaves, sandwiches, or in pizza This time of year it's good in dressings for turkey, too

Many people in this area have their own pork. But if you are buying pork at your meat counter, look for the round purple stamp that signifies the sausage had been federally inspected This mark assures you the meat product is wholesome and safe. Not all sausages are federally inspected—only those which are distributed across state lines

HANDY, HEALTHFUL RICE

Rice supplies food energy at relatively low cost Rice can change its appearance and combine with meats, vegetables or fruits to contribute variety and nourishment to family meals

Cooking methods are similar for long grain, medium grain or short grain. For white rice at its best, follow these general cooking directions Ordinarily you don't need to wash rice before cooking, for it is clean in the package. Cook rice in as little water as possible. It keeps its flavor and has a better texture than when too large a quantity of water is used.

Whether you are baking or boiling rice, use 2 cups water per 1 cup uncooked rice. One cup uncooked rice yields 3 cups cooked, enough for six servings.

Boil rice gently and keep the heat low; cover the pan loosely. Rapid boiling may break the grains. Do not rinse rice after cooking. Use a fork to fluff the grains.

If you like rice more moist and soft so that it packs together easily, increase water to 2¼ cups. Moist rice holds its shape better if you are going to make a ring mold or shape into patties or croquettes.

When rice is left over, cover it and refrigerate To reheat, steam it in a colander or sieve over boiling water Or add a few tablespoons of water to the rice and heat it in a covered pan over boiling water or in the oven. Stir once or twice with a fork.

The texture and mild flavor of rice makes it a good mixer to combine well with many foods in different ways. Serve rice at breakfast as a cereal, with fruit and milk or cream, or in waffles.

For dinner, serve rice in meat cakes, with meat or fish in baked dishes, panned with vegetables, and in stuffings for meat or fish.

Rice is good at lunch or supper with eggs or cheese in omelets or casseroles, with creamed meat, fish or eggs and in desserts.

White rice is low in protein, so be sure you serve it with foods to supplement the nutritive value it lacks.

DESSERTS THAT ARE DIFFERENT — With Pears

The time is mid-winter, and it may be a surprise to you that you are able to find fresh pears at your fruit market. These pears are from the west and are delicious in their own right. They are perfect for eating out of hand; they also combine well with other ingredients for desserts that are distinctive and different. Here are some ideas you might like to try:

(Continued from Page 10)

SERVE YOURSELF PEAR PLATTER — On a large platter arrange fresh cold peeled pear slices and seedless grapes. Spear grapes and pear slices with colorful picks designed for bite size food portions. Dip pears in lemon juice or other citrus or pineapple juice to prevent darkening. In the center of the platter place a bowl of sour cream sweetened with brown sugar. The brown sugar gives the cream a caramel-like flavor. The fruit becomes a finger food to dip into the caramel-cream. This unusual dessert will win favor with teenagers and all who enjoy informal fare. A teen-age chef can enjoy the double pleasure of preparing and serving this fruit platter.

PEAR PERFECTION — Any fruit becomes a special occasion delicacy when served in ginger ale or spiced apple cider. Put a well-chilled fresh or canned pear half, cored side up in a stemmed glass or dessert saucer. Top with orange, lime or lemon ice and pour chilled ginger ale or spiced cider over all Stick a straw into the ice and sip slowly.

FRUIT COMBINATIONS — Calorie counters may wish to use fresh or artificially sweetened fruits·

1. Sliced pineapple, apricot halves, sweet red cherries, and sliced pears.
2. Watermelon balls — when the fresh are out of season try the frozen—peach slices, orange slices
3. Grapefruit sections, banana slices, berries or cherries
4. Grapefruit sections, unpared apple slices
5. Peach slices, pear slices, halves of red plums
6. Pineapple wedges, banana slices, strawberries, and pear slices

State To Launch Drive On Unlicensed Dogs

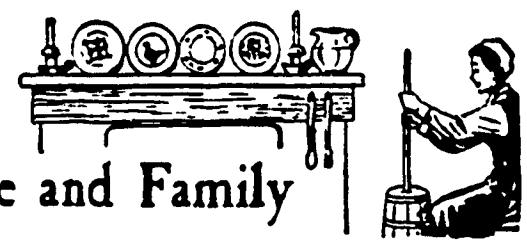
HARRISBURG — Dog owners were warned this week that a statewide checkup will begin February 15 for unlicensed dogs.

According to T. Luke Toomey, director of the Bureau of Dog Law Enforcement, State Department of Agriculture, anyone owning or harboring a dog over six months of age not bearing a current license will be subject to prosecution Penalties on conviction range from fines of $10 to $300 and costs of prosecution, or imprisonment of not more than 30 days

Toomey reminded dog owners that the law states that all dogs must be properly confined or under reasonable control of an individual, that police may seize and detain any dog found running at large, and in such instances the owner is subject to a fine and costs before the dog is returned

The deadline for 1967 licenses was January 16 However, licenses may be obtained at any time at county treasurers' offices

For the Farm Wife and Family



Ladies, Have You Heard? . . .

By Doris Thomas, Extension Home Economist

Snacks Part Of Day's Meals

Simple, nutritious snacks can be good for you.

Snacks can help satisfy hunger.

Emotional upsets and fatigue can be prevented by eating snacks.

Fruit, rather than high-calorie foods, eaten between meals won't spoil the appetite

Working Homemakers Need Work Plan

Careful planning of household chores can make a working homemaker's job easier

List all household jobs. Divide them into daily, weekly or occasional groups

Assign one weekly job a day, for instance, cleaning one room each night Try to leave one night free for the unexpected

THOMAS

One big job a week might eliminate heavy seasonal cleaning

Some daily jobs could be assigned to other members of the family

Plan menus for the week and buy easy-to cook or prepared foods to make meal preparation faster some evenings

Try to shop for a whole week at a time Home freezers are a big help

As you replace old garments, buy easy-to care-for clothing

Buy labor saving tools and appliances as you can afford them

Expect to lower your standards of good housekeeping in order to save yourself

Don't Hurry

Wage a war on hurrying, the cause of two thirds of accidental deaths that occur in the home in the United States each year

Keep stairways and passageways clear of clothing, tools and toys

Anchor rugs securely.

Avoid loose scatter rugs

The more you polish waxed floors, the harder and safer the wax becomes . Between waxings use only a dry mop for further safety.

Keep stepladders in good repair and use them properly

Wipe up all spills immediately.

Provide adequate lighting in halls and on stairs

(Continued on Page 7)

Weather

Look for temperatures to average below normal for the next five days with little day-to-day change. But take heart, the normal high is beginning to move upward with the calendar — normal temperature range is now 41 to 23 degrees.

Precipitation? Snow? Looks very possible for Monday or Tuesday. That storm now building in the Rocky Mountains is expected to slide south to the Gulf, and then tour the east coast. The weatherman sees ½-inch or more, melted, coming our way.

● Dairy Day

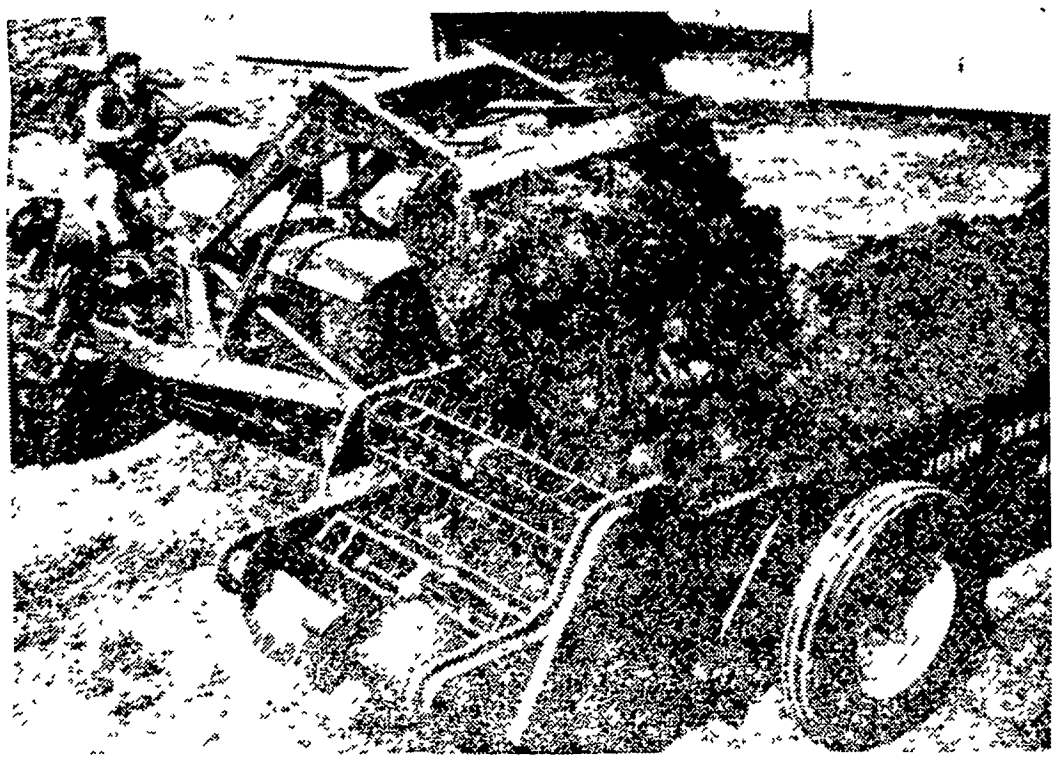
(Continued from Page 1)

sored dairy meetings to be held at the John Neff School, Neffsville.

The first of these will be on February 15th, at 8 p.m., and will include talks on "Forage Production" by Dr. John Baylor, agronomy specialist, and "Balanced Rations For Dairy Cattle" by dairy nutritionist Richard Adams. Both speakers are Penn State extensionmen.

The second dairy informational meeting will be held March 15th at the Neff school beginning at 8 p m Speakers, Dr Sam Guss and Stephen Spencer, will discuss herd health problems

All interested dairymen in the county are invited to attend these informational meetings, Plastow stated



100 tons...
an easy day's work
with a John Deere 46A Loader and 44 Spreader

Dig in! 200,000 pounds in one day is a man-sized job But it's no back-breaker if you're powered up for it with a smooth-working 46A Loader and 44 Spreader.

The 46A Loader puts 3,000 pounds of breakaway brawn and more than a ton of lift power at your fingertips Its 5-foot-wide bucket takes a mighty big bite.

There's no penalty for piling it on the sturdy 44 Spreader The deep, extra-wide, steel-reinforced treated-wood box holds 185 bushels . . . a 5-ton payload.

4-H NEWS

SOIL STUDY FEATURED AT CONSERVATION CLUB

Talks, a demonstration and a film on soil highlighted a meeting Friday evening of the Northern Lancaster 4-H Soil and Water Conservation Club at the home of Aaron Z Stauffer, Ephrata R1

The demonstration, by Jeffrey and Ricky Pfautz, Stevens R1, was given in conjunction with a talk by Curtis Horst, New Holland R1, on the 'Size of Soil Particles.'

Ephrata vocational agriculture teacher, Charles Ackley spoke on Soil Texture. A film, 'to Conserve Our Heritage,' was shown.

Named to a fund raising committee to help finance field trips were Melvin Wise, Philip and Calvin Zimmerman, all of Ephrata R1.

The next club meeting, scheduled for Friday, Feb. 17, at 7:30 p m., will be at the home of Dr. Paul Schantz, Ephrata R1.

Forcing Bulbs

Bulbs forced in winter in the home are chiefly the hardy, spring-flowering types such as tulip, hyacinth, daffodil, crocus, and snowdrops All hardy bulbs need a low temperature or cold treatment to induce flowering says Robert Nuss, extension ornamental horticulturist at Penn State University. The cold treatment is necessary to break the dormancy and stimulate the flower bud into growth Subsequent warm temperature will induce the bulbs to bloom.

The only reason a great many families don't own an elephant is that they have never been offered an elephant for $1 down and $1 a week.
